## ### 2. EXTRACTED TEST RESULTS

#### \*\*C-Reactive  
Protein (CRP)\*\*  
- \*\*Value\*\*: 2.12  
- \*\*Units\*\*: mg/L  
- \*\*Reference Range\*\*:  
< 5 mg/L  
-  
\*\*Method/Technology\*\*:  
Fully Automated Latex  
Agglutination -  
Beckman Coulter  
- \*\*Notes\*\*:  
    - Acute phase  
    determination: < 5

mg/L

- Concentrations >5 mg/L suggest infection or inflammatory process.

- CRP is a nonspecific marker and cannot be interpreted without other clinical information.

---

#### \*\*Dengue NS1  
Antigen Rapid Test\*\*

- \*\*Value\*\*: Negative

-

**\*\*Method/Technology\*\***:  
Rapid  
Immunochromatographic  
Assay

- **\*\*Notes\*\***:

- Positive: Presence of Dengue NS1 Antigen

- Negative: Absence of Dengue NS1 Antigen

- This is a screening and qualitative test; positive results require confirmatory methods like ELISA.

- False negatives can occur in the early course of the disease.

- Dengue NS1 antigen can be detected in the first five days of fever.
